KIDS PROTECTION SOLUTION

Kidz Pulse improves on the popular Kidz system with the addition of Pulse--**Accutech's premier real-time monitoring technology**. This ever-vigilant system monitors the presence of all active pediatric tags, assuring every kid is continuously accounted for via our proven security technology.

## All-new features

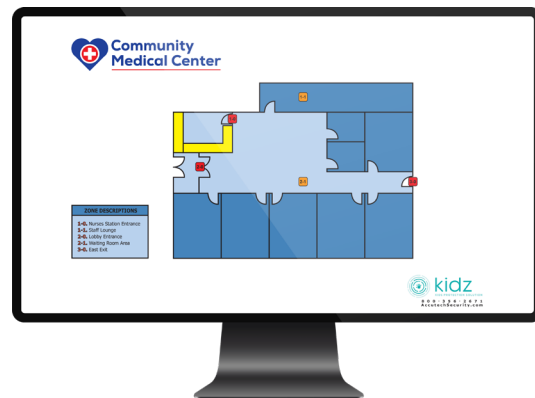

### Improved beaconing technology

When not in an alarm state, the Kidz Pulse tags send out a signal every 1.5 seconds to check in with the system. If seven of these signals are missed in a row, the system will notify your staff and can lock down the floor as fast as 15 seconds of a tag's presence not being detected. **That's up to 90 seconds earlier than our competitors!**

### Fully configurable software

Now you won't have to worry about taking apart controllers to access their internal components. All receivers are IP addressable, and we can troubleshoot or customize zones from our software. We've also shrunk the receivers and reduced the footprint of the controllers **surrounding the door**. Your staff will love the new streamlined design!

## These great Kidz features still remain

### Hardware driven, software enhanced platform

While we have made many improvements to the Kidz product, we have maintained the philosophy of providing a system that can operate independently of the software, keeping your patients protected in the event of a computer or network failure.

### Fixed-length band with cut-band technology

The Kidz fixed-length band is uniquely designed to prevent patient elopement with its tamper-proof technology. Once secured, the tear-resistant band immediately triggers an alarm if tampered with or the circuit is compromised. Our cut-band technology can seamlessly integrate into your facility's security system. If the band is compromised, automatic door locking and facility-wide alarms can sound.

### Maintaining the lowest false alarm rate in the industry

Accutech Security systems continue to deliver the lowest false alarm rate in the industry. The Kidz system uses a unique RFID technology, data filtering, and changing exciter frequencies to identify and eliminate false alarms, preventing alarm fatigue and letting nurses focus on providing quality care.

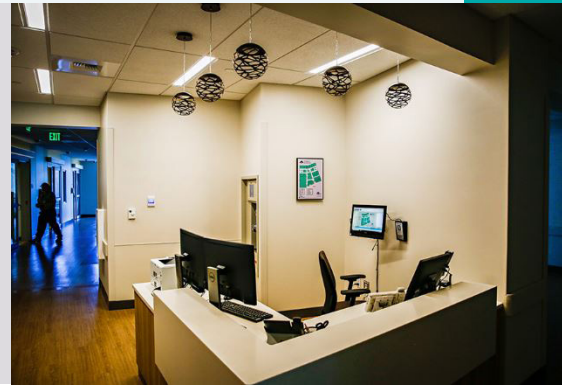

# Kidz Pulse vs. Kidz

	Kidz Pulse	Kidz
<b>Works if CPU/Network goes down</b>	✓	✓
<b>Customizable Software (dashboard)</b>	✓	✓
<b>Alarms when approaching exits</b>	✓	✓
<b>Alarms instantly when tag is removed</b>	✓	✓
<b>Tags turned off when not in use</b>	✓	✓
<b>Alarms when a tag is missing</b>	✓	
<b>Fully configurable via software</b>	✓	
<b>Real-time monitoring technology</b>	✓	
<b>Constant wireless communication with tags</b>	✓	
<b>Notification as fast as 15 seconds of a missing tag</b>	✓	
<b>Can monitor thousands of tags at once</b>	✓	

“We’ve used the Kidz system for over four years and find it to be extremely user-friendly and reliable. Plus, Accutech is great to work with—they’re always responsive to our needs. We highly recommend Accutech to other hospitals.”

- Nancy Sander, Director of Pediatrics

## What happens to my current Kidz installation?

At Accutech, we believe in assisting our customers by providing long-term support for products. We will continue to manufacture, supply, and service our Kidz products. From the next generation to our classic products, we offer system solutions for any size of budget and hospital. We offer free 24/7/365 technical support and multiple local partner options for your convenience. There are no software maintenance requirements for the life of the system, and we’ll continue to provide software upgrades and add functionality to the system at no cost to you.
